Automation Factory

# Maven – Selenium Junit Testing for Java Project:

Download and install Selenium using URL… https://www.seleniumhq.org/

Follow the URL to download correct version. https://bit.ly/2zm3ZzF

Cone the GITHUB project from https://github.com/ganeshhp/TestNGSeleniumProject.git

Installing Browser driver for Selenium

Also make sure to download Chrome browser driver for Selenium using below URL…

https://chromedriver.storage.googleapis.com/index.html?path=2.45/

Extract the file and place the .exe file at any folder of choice and provide the path in your test script.

For example,

Default location on Windows is: `C:\Program Files\(select the folder you want to put your file)\chromedriver.exe`

In your Selenium code, paste the driver path correctly, for example:

```
System.setProperty("webdriver.chrome.driver", "C:\\Program Files\\Java\\chromedriver.exe");
```
